STORAGE HEATERS

WHAT YOU'LL NOTICE DAY TO DAY

-  Your home feels warm from morning through evening
-  You may pay less for heating if you're on an off-peak tariff (such as Economy 7 or 10)
-  You can adjust the heat easily

TOP TIPS FOR LOOKING AFTER YOUR STORAGE HEATER

-  Turn the input or charge setting up on colder nights so the heater stores more heat, and down on milder days.
-  Use the output or boost setting only when you need extra warmth. Keeping it low helps the heat last all day.
-  Do not cover it, lean things on it, or place furniture too close. This helps heat spread properly and keeps it safe.
-  Wipe the front and top gently with a dry cloth. Keeping it clean helps it work more efficiently.
-  Don't switch it off at the wall: It needs to charge overnight. If you turn it off, it won't warm up for the next day.
-  Make sure you're on the right tariff
Storage heaters work best with off-peak tariffs like Economy 7 or 10.
